Experience

DoorDash, Inc.

October 2025 – Present

Software Engineer

- Built and deployed agentic scraping platform with reusable AI skills, multi-agent orchestration, and deterministic validation gates; delivered **30+ production scrapers in one week**
- Productionized Python/Scrapy and Kotlin pipelines processing millions of SKU-location records across **40+ merchants**
- Re-engineered major retailer catalog scraper from HTML crawling to direct API; cut runtime **17 hours to 3 minutes**, expanded coverage **654 to 1,529 products**, reduced failures **3.9% to zero**, added hidden data
- Automated eight-stage SKU governance process with one run, restoring SKUs that generated **\$2.8M** cumulative GOV
- Built a monthly 8-stage SKU governance pipeline, protecting **\$2.8M in sales** and freeing capacity for new selection
- Automated nationwide store-data audits for **20+ live integrations**; reduced cancellations from stale hours and closures

University of South Carolina

August 2023 - May 2025

Web Scraping Engineer

- Built resilient data pipelines collecting **3M+ Amazon and Kroger product and seller records** for academic market research; sustained **99.9% collection success** across months-long crawls
- Improved crawl throughput by approximately **95%** through custom JavaScript execution within Selenium, replacing element-by-element WebDriver operations with direct DOM extraction
- Modeled seller-product relationships as a graph; implemented breadth-first crawling to prioritize sellers by ratings, review volume, and product count while maximizing coverage and preventing duplicate traversal

Undergraduate Teaching Assistant

Courses: Algorithm Design I & II | Programming Concept & Web Development

- Led Java data structures and algorithms labs for **30+ students**; provided programming instruction and technical mentorship support to **200+ non-CS students**, including a **24+ student honors section**

Wordification by ScholarsTech LLC

May 2024 – May 2025

Software Engineer

- Built no-account interactive game preview, allowing educators to experience lessons from a student's perspective and validate teacher-configured content before assignment
- Developed automated speech-generation QA pipeline using ElevenLabs and Google Cloud speech recognition; achieved **99.9% validated audio accuracy** through transcript verification and automatic regeneration

Schaeffler Group

May 2024 – August 2024

Software Engineer Co-op

- Built production Mendix application digitizing paper-based machine configuration across plant-wide manufacturing operations; centralized configurations in a controlled, database-backed system
- Developed role-based workflows, reusable templates, Java extensions and API integrations for one-click creation and bulk editing of machine parameter sheets
- Migrated and cleaned **1M+ legacy machine records** into a new database with **99.9% reconciliation accuracy**, using Damerau-Levenshtein matching to replace manual record-by-record mapping
- Integrated contextual Jira reporting with automatic error details, screenshots, and page metadata; enabled production-floor users to report defects directly and accelerated resolution

Education

University of South Carolina

May 2025

B.S. Computer Science, Minor in Cybersecurity

GPA: 3.8

- Dean's List (2021–2025), Magellan Research Award (2024–2025), ACM@USC Webmaster (2024)
- Morgan Stanley Code to Give, Second Place (2023), CockyHacks Best Design (2024)

PROJECT

Automotive Gen AI Capstone | *C#/ASP.NET, JavaScript/React, Azure, AI*

May 2025

LLMs Reviewer Classification | *PyTorch, Transformers, DistilBERT, GPT2, Fine-Tuning, Text processing*

May 2025

Technical Skills

Languages: Python, Kotlin, Java, JavaScript/TypeScript, SQL, C#

AI & Data: PyTorch, Transformers, LLM Evaluation, Agentic Workflows, Snowflake, Databricks, PostgreSQL

Frameworks & Cloud: Scrapy, Playwright, Selenium, Zyte API, gRPC, GraphQL, AWS, Google Cloud, Docker
